WALL MOUNTED DIAGNOSTIC SET

High Quality Electronics Combined in One Wall Unit – our smart KaWe MedCenter® 5000

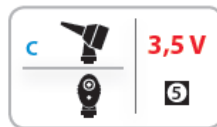

Wall-mounted stations are used in many medical practices and clinics worldwide. They provide a space-saving organizational and charging station for valuable instruments, keeping them easy to reach, charged and ready for use 24 hours a day.

The KaWe MedCenter® 5000 wall-mounted station for ENT instruments combines high-quality electronics with modern design and guarantees numerous combination possibilities for the individual assembly of the sets. With the wall station's module system (which consists of basic and accessory modules), holders for different types of instruments can be combined as needed. Assembly is easy. All of the instruments have ergonomic handles with unique dimmable light switches, the user-friendly "soft-touch-system" (KaWe STS®). With this so-called ststechnology,

soft push buttons are used to adjust the light intensity as needed.

The last used light intensity setting is saved even after the handle is removed (memorized light function). The instruments also have a theft-deterrent system to guard against unauthorized use.

The KaWe MedCenter® 5000 wall-mounted station combines high technical quality with reliability and user safety.
